

Special Alert –2016 – 2017 Initial Influenza Vaccine Now Available

Dear Partners,

We have been notified today that the initial portion of the Kansas 2016 – 2017 influenza vaccine is available for order. We currently have 16% of our full request available for the 36 months and older presentation.

Available as 8/12/16						
Manufacturer	Brand	NDC	Age	Presentation	VFC Available	CHIP Available
GSK	Fluarix Quad (IIV4)	58160-0905-52	36mos+	10 1 dose syringes	2700	3500

At this time, we request that all VFC providers submit your complete 2016 – 2017 influenza vaccine order in WebIZ. You will only need to submit one order for the season. We will begin filling your order with the percentage of vaccine we have available and will continue to work from that same order to ship vaccine to you until your order is filled. We will compare your order to the influenza order prediction you completed during the annual enrollment period prior to initiating the filling of your order to assure they are aligned with your population profile.

If later in the season you believe that you need to adjust your season order, please contact your regional nurse with the request to adjust your order and include an explanation for your request. Your regional nurse will review your request and clarify any necessary details with you then forward the request to the Topeka office to determine if the request can be fulfilled.

If you have any questions about this process, please email vaccine@kdheks.gov or contact Phil Griffin (pgriffin@kdheks.gov or 785-296-8893).

We have been notified of the following projected 2016-2017 distribution of CDC purchased doses:

Manufacturer	Brand / Description	NDC	Projected 2016-17 Influenza Distribution for CDC Purchased Doses
